

DEVENDRA AGNIHOTRI

Staff iOS Engineer • React Native Developer

Noida, India (Ready for Relocation) | +91 85058 23517 | devendra.bhumca12@gmail.com

Portfolio: devendrabhumca12.github.io | LinkedIn: [devendra-agnihotri-5b0617a8](https://www.linkedin.com/in/devendra-agnihotri-5b0617a8) | GitHub: [devendrabhumca12](https://github.com/devendrabhumca12)

PROFESSIONAL SUMMARY

Staff iOS Engineer with **11+ years** designing and shipping production iOS applications in **Swift, SwiftUI, UIKit, and Objective-C** across enterprise banking, IoT, networking, and consumer products, including **cross-platform delivery in React Native**. Contributor to live App Store products for global brands — ENBD X (Emirates NBD), IKEA Home Smart, NETGEAR Orbi and Nighthawk, and UKG Pro. Hands On in **Clean Architecture, MVVM/MVVM-C, Swift Concurrency**, and modular SPM design that keeps large codebases testable as teams and features grow. Mentor iOS engineers, own code-review and release-quality standards, and build **on-device AI** features with Apple Foundation Models, Vision.

TECHNICAL SKILLS

Languages: Swift, Objective-C, TypeScript, JavaScript

Frameworks & SDKs: **SwiftUI**, UIKit, **SwiftData**, Core Data, Combine, Vision, NaturalLanguage, Apple Foundation Models, CoreLocation, MapKit, MultipeerConnectivity, CoreBluetooth / BLE, Push Notifications (APNs)

Concurrency: Swift Concurrency (async/await, Actors, **Structured Concurrency**, Task Groups, Sendable, strict concurrency checking), GCD, Operation Queues, thread safety, data-race elimination

Architecture & Design: Clean Architecture, **MVVM, MVVM-C**, Coordinator pattern, SOLID, Dependency Injection, Modular Architecture, Composable Architecture, feature-based modularisation, Protocol-Oriented Programming, Design Patterns

React Native & Cross-Platform: **React Native**, React Hooks, TypeScript, React Navigation, state management, Props, iOS + Android release builds

On-Device AI: Apple Foundation Models, Vision OCR, **semantic embeddings**, hybrid BM25 + vector search, offline-first inference

Testing & Quality: XCTest, **Unit Testing**, Test-Driven Development, code-review standards, crash-free-rate monitoring

Networking & Data: REST APIs, URLSession, JSON and Codable, GraphQL, Core Data and SwiftData persistence, offline-first sync, caching strategies

Performance & Security: Xcode Instruments (Time Profiler, Allocations, Leaks), memory-leak and retain-cycle resolution, launch-time optimisation, **Keychain, SSL pinning** and TLS, secure coding, **AES Encryption**, RSA Encryption, **Cryptokit**

Tooling & Delivery: Xcode, Swift Package Manager (SPM), CocoaPods, Git and GitHub, **CI/CD pipelines**, App Store Connect, TestFlight, JIRA, Confluence, Agile / Scrum

AI-Assisted Development: **Cursor, GitHub Copilot, Claude**, OpenAI tooling, Model Context Protocol (MCP), prompt engineering, RAG systems; exploring visionOS

PROFESSIONAL EXPERIENCE

NAGARRO SOFTWARE — Noida, India

09/2021 – Present

Staff Engineer, iOS

- Own reusable, scalable iOS architecture across multiple enterprise projects, establishing **Clean Architecture and MVVM-C standards** that keep feature modules independently testable and shorten integration cycles.
- Design **shared component libraries** consumed by multiple squads, and drive the code reviews that keep them consistent as teams and codebases grow.
- Led migration of legacy GCD and completion-handler code to **Swift Concurrency (async/await, Actors, structured concurrency)**, eliminating data races and an entire class of threading crashes.
- **Mentor iOS engineers** on Swift best practices, concurrency, debugging, performance tuning, and modern development workflows.
- Partner with product owners, backend, QA, and design to negotiate API contracts and release scope, improving **release efficiency** across concurrent projects.
- Embedded **AI-assisted development (Cursor, GitHub Copilot, Claude)** into the team SDLC for scaffolding, test generation, and documentation, with secure-coding review gates that keep generated code production-grade.

ALTRAN (NOW CAPGEMINI ENGINEERING) — Gurugram, India

08/2019 – 09/2021

Senior Software Engineer, iOS

- Shifted the team's focus toward **app architecture, performance optimisation, and concurrency handling**, raising the engineering bar on production-critical applications.
- Refactored view-controller-heavy modules to **MVVM with dependency injection**, isolating business logic behind protocols and making previously untestable code unit-testable.
- Applied **Swift Concurrency and GCD** to move parsing and I/O off the main thread, eliminating UI hangs and dropped frames on data-heavy screens.

- Embedded **CI/CD pipelines and XCTest** unit-testing discipline into daily practice as release gates, reducing regressions reaching QA.

VVDN TECHNOLOGIES — Noida, India

09/2017 – 08/2019

Senior Software Engineer, iOS

- Delivered end-to-end iOS features in Swift and UIKit on a **modular architecture**, owning modules from requirement analysis to App Store submission.
- Owned the **full release pipeline** — provisioning, code signing, TestFlight distribution, App Store Connect submission, and post-release monitoring.
- Drove application stability through production issue resolution, and sustained code quality through structured code reviews and clean-coding practices. Awarded “Gems of the Year” 2018–19.

MOBULOUS TECHNOLOGIES — Noida, India

07/2015 – 08/2017

Software Engineer, iOS

- Owned complete iOS app delivery from development through **App Store release**, working directly with clients and stakeholders on scope, acceptance criteria, and change requests.
- Built and maintained features across **Objective-C and Swift** codebases on multiple concurrent client projects.
- Integrated and maintained third-party SDKs for maps, analytics, and payments, adding location, tracking, and in-app payment capability to client applications.

SHIPPED APP STORE PRODUCTS

- **ENBD X** — Emirates NBD (Finance): mobile banking super-app covering many services across accounts, cards, transfers, and investments. Built reusable Payments and Lending components. Swift, SwiftUI, modular architecture.
- **NETGEAR Orbi & Nighthawk** (Utilities): Companion apps for mesh Wi-Fi and router lines with remote network management, parental controls, and security. Owned device onboarding for both. Swift, SwiftUI, REST APIs.
- **IKEA Home Smart** — Inter IKEA Systems (Lifestyle): Smart-home control for the TRÅDFRI ecosystem — lighting, blinds, and connected devices. Built Google Assistant, Alexa, and Sonos integrations plus the Settings experience in Swift and UIKit.
- **Wedding Vows** — (Entertainment): Guest-experience app covering photos, event details, dress code, video reels, and documents. Built solo from scratch through App Store release, owning architecture, testing, and release management. Swift, SwiftUI.
- **UKG Pro** (Enterprise): Workforce-management platform covering scheduling, time tracking, and employee engagement at scale.

OPEN SOURCE & INDEPENDENT ENGINEERING

- **FormEasy** — Offline-first document-preparation app for government, job, exam, and KYC upload portals. Crop, resize, compress, and format conversion run entirely on-device — no backend, no accounts, no uploads of personal ID documents. Crop-rectangle math and JPEG-quality binary search isolated as pure functions, unit-tested in Jest. React Native, TypeScript.
- **FindKeep** — On-device natural-language search across screenshots and photos using hybrid BM25, semantic embeddings, and tag matching. Vision OCR and SwiftData, fully offline.
- **MedsPlain** — Scans a medicine label and turns dense dosage text into a plain-language instruction card using Vision OCR and Apple Foundation Models. No cloud AI, no backend.
- **ActionBrief** — Converts messy notes into a structured action checklist using on-device Apple Foundation Models, with a local NaturalLanguage fallback when they are unavailable.
- **Multipeer-ChatApp** — Swift/SwiftUI framework for exchanging text and images directly between iOS devices over MultipeerConnectivity, with Core Data-backed message persistence.
- **Open-source SwiftUI components** — Reusable libraries published for other iOS engineers: **NetworkManager** (reachability / connectivity), **CustomAlertView**

AWARDS & RECOGNITION

- **Team Lead, Cursor Hackathon In Nagarro** — Led the team that shipped an event-companion app end to end, owning the full SDLC from concept to working release under competition deadline.
- **GitHub Copilot Hackathon In Nagarro** — delivered a complete build through AI-assisted development, covering the full SDLC from requirement to demo.

EDUCATION

Master of Computer Applications (MCA) — Banaras Hindu University (BHU), Varanasi, India

2012 – 2015

Bachelor of Science (B.Sc.) — CSJM University, Kanpur, India

2008 – 2011
